

Geraldo Macias

SOFTWARE ENGINEER

Santa Maria, CA 93458 • macias.g@outlook.com • 805-868-8592

PROFESSIONAL SUMMARY

Senior-level Software Engineer with a track record of building internal platforms and data-driven tools for high-performance sports organizations. Experienced in full-stack development, API design, and transforming complex operational data into actionable, user-facing applications. A lifelong basketball fan eager to apply engineering craft to NBA decision-making.

TECHNICAL SKILLS

FRONTEND

React, Angular, TypeScript, JavaScript, HTML/CSS

BACKEND & APIS

C#, .NET Core, ASP.NET Minimal API, RESTful Services, Flask, Python

DATABASES

MS SQL Server, BigQuery, Cloud SQL, Query Optimization, Stored Procedures

CLOUD & DEVOPS

GCP (Cloud Run, Cloud Build, Artifact Registry), AWS S3, Docker, CI/CD, Redis, Cloud Secrets

DATA VISUALIZATION

Python, Matplotlib, charts & analytical graphs

TOOLS

Git, Twilio API, Microsoft Graph API, xUnit

EDUCATION

B.S. in Software Engineering

California Polytechnic State University, San Luis Obispo

ENGINEERING EXPERIENCE

Application Developer II

Dec 2021 – Present

[Los Angeles Dodgers](#) | [Los Angeles, CA & Remote](#)

- Built an internal performance review platform for 500+ employees end-to-end, replacing a third-party SaaS tool (Lattice) and delivering significant annual cost savings; demonstrates ability to own complex internal tooling from requirements to launch.
- Architected a real-time alert system integrating Twilio and Microsoft Graph API; optimized messaging protocol to increase SMS throughput 20x while cutting costs, directly applicable to time-sensitive player and staff communication tools.
- Developed a secure web application providing players' families with live access to travel, scheduling, and contact data; experience building sensitive, role-gated applications for sports personnel.
- Digitized 12+ Excel-based departmental workflows into secure intranet forms, reducing data entry errors and accelerating approval timelines; mirrors the role's goal of turning spreadsheet-based processes into interactive tools.
- Deployed custom CoPilot agents as internal AI chatbots, using organizational documentation as a knowledge source.
- Managed full project lifecycle on a small team: requirements, iterative dev, customer feedback, and delivery.
- Mentored junior developers and fellows; created documentation and best-practice guides that shortened onboarding ramp.

Software Development Engineer II

Jun 2019 – Dec 2021

[Yardi Systems](#) | [Goleta, CA & Remote](#)

- Developed and maintained full-stack financial applications using C#, .NET, Angular, and AWS S3.
- Built reusable UI components and scalable service layers to improve maintainability.
- Engineered a mobile check scanning feature for Android enabling tenants to pay rent directly from their phones; adopted by hundreds of customers across the platform.

Workplace Engineering Intern

Jul 2017 – Aug 2017

[Mechanics Bank](#) | [Santa Maria, CA](#)

Junior Network Engineer

Jun 2014 – Nov 2014

[Indyne Inc.](#) | [Vandenberg Air Force Base](#)
